

Nominee: FalconStor

Nomination title: FalconStor Company

FalconStor® Software, Inc. is a leading software-defined storage company offering a converged data services software platform that is hardware agnostic. Our open, integrated flagship solution FreeStor™ reduces vendor lock-in and gives enterprises the freedom to choose the applications and hardware components that make the best sense for their business. We empower organizations to modernize their data center with the right performance, in the right location, all while protecting existing investments. FalconStor's mission is to maximize data availability and system uptime to ensure nonstop business productivity while simplifying data management to reduce operational costs. Our award-winning solutions are available and supported worldwide by OEMs as well as leading service providers, system integrators, resellers and FalconStor.

Why nominee should win

FalconStor's vision is to give their customers a competitive advantage with flexible, robust data management. FalconStor's technology ensures data availability and system uptime for nonstop business productivity, while simplifying storage management and improving efficiency to reduce operational costs. The open, integrated software solutions reduce vendor lock-in and give organizations the freedom to choose the applications and hardware components that make the best sense for their business, now and as they grow into the future.

Built upon a unified platform of data services, our award-winning products include the FalconStor® Network Storage Server (NSS), FalconStor® Continuous Data Protector (CDP), and FalconStor Optimized Backup & Deduplication.

All products feature built-in application awareness and WAN-optimized replication for the highest levels of bandwidth efficiency. Our open, integrated, scalable solutions reduce vendor lock-in, giving IT departments the freedom to leverage the hardware and connectivity of their choice.
